Dependency graph (importer → imported)

Filled: changed by the migration. Showing 11 of 11 files.

Plan

Files are edited in dependency order (FR-3): a module is migrated before the modules that import it, so no batch ever runs against a half-migrated dependency. 0 import cycle(s) were collapsed into single atomic batches, since a cycle has no safe internal order. Batches are capped at 3 file(s), except that a cycle is never split.

Batch	Files	Note
0	src/app/clock.py, src/app/config.py	

Collapsed cycles: none. FR-3 violations: 0.

Metrics

Issues & residuals

Level	Issue and evidence	Recommended action
× RED	The agent gave up: a failure outlived MAX_FIX_ATTEMPTS. Evidence: metrics.json: outcome=gave_up	Fix the blocked failures by hand; the timeline lists every attempt.
× RED	The final suite has failed, errored or uncollectable tests. Evidence: test_report.json: 1 failed, 0 errors — tests/test_report.py::test_age_days_is_non_negative_int (TypeError)	Fix the listed tests' failures in the migrated code (never in the tests).
